...

7. Restriction mapping is an exercise in critical thinking and logic. Plasmid S5 is difficult to completely map because of the numerous PstI restriction sites. With the data, it would be very difficult to place all the restriction sites in order. It is easier to map plasmid S3.

## **Restriction Mapping of Plasmid DNA Kit | Carolina.com**

Restriction mapping is the first step in characterizing a novel DNA sequence. It is commonly used to confirm that a new fragment of DNA has been ligated into a plasmid. It is also used to verify the identity of a plasmid, since the

no EcoR I site (6).

Confusingly, the plasmid map of pGreen in the Carolina teacher's manual does show both an EcoR I site and a Hind III site and gives a different plasmid size of 4528 base pairs (2).

Mapping Exercises  
[12/8/2008 4:27:56 PM]

Plasmid Mapping  
Restriction enzymes  
are proteins that  
separate a DNA  
molecule at a specific  
location (locus). Think  
of them as molecular  
scissors. The terms  
"cut," "digest," or  
"restrict" may be used  
to describe the action  
of a restriction enzyme.
