Chapter 2c - Gamma Type Stirling Engines. Gamma type engines have a displacer and power piston, similar to Beta machines, however in different cylinders. This allows a convenient complete separation between the heat exchangers associated with the displacer cylinder and the compression and expansion work space associated with the piston. Thus they tend to have somewhat larger dead (or unswept) volumes than either the Alpha or Beta engines.

Gamma Type Stirling Engines (updated 12/26/2011)

A gamma Stirling engine has two cylinders, one containing the power piston and one containing the displacer. The cylinders are located alongside each other and the air runs through a small port between the two. The power piston and the displacer are often connected by the flywheel.
