The simplest Quadratic Equation is: $f(x) = x^2$. And its graph is simple too: This is the curve $f(x) = x^2$ It is a parabola. Now let us see what happens when we introduce the "a" value: $f(x) = ax^2$

Graphing Quadratic Equations - MATH

The most basic quadratic is $y = x^2$. When you graphed straight lines, you only needed two points to graph your line, though you generally plotted three or more points just to be on the safe side....

Before beginning this lesson, please make sure that you fully understand the vertex formula, factoring quadratic equations, and the quadratic formula. One way to graph a quadratic equation, is to use a table of values. While this method works for every quadratic equation, there are other methods that are faster. For any quadratic equation in the form: $y = ax^2 + bx + c$. The graph will result in a parabola.

The graph of any quadratic function $f(x) = ax^2 + bx + c$, where a , b , and c are real numbers and $a \neq 0$, is called a parabola. When graphing a parabola always find the vertex and the y -intercept. If the x -intercepts exist, find those as well. Also, be sure to find ordered pair solutions on either side of the line of symmetry, $x = -\frac{b}{2a}$.
